PROFILE

Experienced and self-motivated designer bringing two valuable industry knowledge. Problem solver oriented to results with proven record of working collaboratively with team members to achieve goals. Worked to align strategically technology, user desires and stakeholders needs through my own learning.

EDUCATION

Bachelor of Science degree in Computer Systems Engineering from ESCOM - Instituto Politecnico Nacional

EMPLOYMENT HISTORY

User experience designer, Wizeline March 2020 - May 2020

I participated in the migration plan of a big eco-system for a really big company. The challenge was to disappear the monolithic and legacy systems in order to bring a custom experience to the users instead of one big silo of user interface constrained by levels of accesses. I designed the new information architecture of each type of user based on a previous user research.

Software Engineer, Wizeline September 2019 - November 2019

These platforms help to quote with a wide range of carriers. I developed "Progressive" one of the 8 main auto insurance functionalities using python and selenium for the Back End and Angular for the Front End, we set up the distributed architecture using AWS services such as SQS and SNS this way you can increase concurrence between carriers.

Software Engineer-UI Designer, Wizeline October 2018 - February 2019

Design, development, and delivery of a tax booking platform for a client in L.A. California, the application categorizes and provides useful filtering and reporting to the expenses and incomes provided by a bank account from the user.

Freelancing October 2017 - April 2018

I led the designing, development, and shipping of a reporter web application. I was the designer, technical writer, project manager, and developer of an online reporter tool that helped a company to make reports on the fly and outside the offices. They primarily use it for reporting train issues on-site, since this company business was repairing trains.
